

★ "Super" keyword :

→ It is a reference variable.

→ helps the child class to access methods / functions of its parent class.

super.variable → to access parent variable.

super.method → to call parent method.

super() → to call parent constructor.

* Interface :

- ↳ It is a blueprint of a class.
- ↳ It doesn't contain body.
- ↳ Used to achieve multiple inheritance.
- ↳ It helps in hiding implementation details (Abstraction).
- ↳ All interface methods are public & abstract.

Syntax:

```
interface InterfaceName {  
    // ...  
    // ...  
}
```

* "final" keyword :

- It is a non-access modifier.
- It restricts changes in particular thing or parts of body like variable, method & classes.

Final variable → Aadhaar number

Final method → company policy

Final class → a sealed box.

* "instanceof" keyword :

- ↳ to check relationship b/w an obj. & a class.
- ↳ to test whether an obj. is an instance of a specific class or ~~not~~ subclass.

↳ It returns boolean values only. (0/1 / true/false)

Syntax :-

objectName instanceof className ;

★ "this" keyword :

→ It is used when local & instance variables have same name so, to know which one is being current used, we use this keyword.
