

* Inheritance :

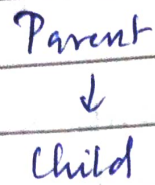

→ method to acquire properties and methods of another class.

→ To reuse code & method overriding.

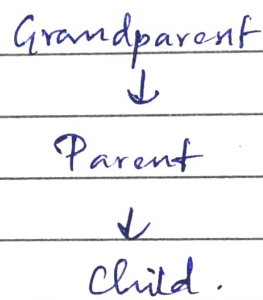

→ Single inheritance :

- One class inherits from another class.
- Uses "extends" keyword.

→ Multilevel inheritance :

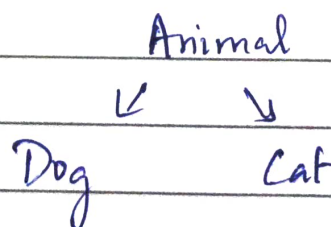

- A class is derived from another subclass.

- Uses "extends" keyword.

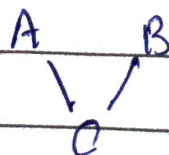

→ Hierarchical inheritance :

- Multiple classes inherit from a single parent class.

→ Multiple inheritance :

- It is not supported with classes and also known as Diamond problem as it causes ambiguity.

___/___/___

- Doesn't support multiple inheritance with classes, but allows it using 'interfaces'.

- Uses 'implements' keyword.

- Interface doesn't contain any functionality

→ Hybrid inheritance :

- Combination of 2 or more types of inheritances (Hierarchical + Multiple)

- Uses "interface" and "implements" keyword & "extends" keyword for the last class.
